Product

Slewing bearing

1、 Equipped with large diameter slewing bearing, which can stand the impact, with high loading capacity, full-sealing, self-lubricating, waterproof, dustproof and pollution prevention.

Original packaging Japanese pilot control valve

1、 With proportional pressure reducing valve, the operators can control the operations accurately according to the specified working pressure profile. It is flexible, portable and reliable.

Japanese walking motor +deceleration machine

1、 With hydraulic time delay break, buffer starting valve, double walking speed automatic/manual switching, it is guaranteed that the moment and rotational speed can adjust to the ground working environment.

Original packaging Japanese swing motor + deceleration machine

1、 With hydraulic time delay break, swing prevention valve, buffer starting valve. The impact and swing can be reduced, thus the positioning operation can be more accurate, and the life of components prolonged.

Original packaging Japanese main valve

1、 Original packaging Japanese main valve: rotary priority valve, boom collecting valve, bucket pole collecting valve, bucket pole locking valve, straight walking valve, oil return recovery valve, breaking hammer service valve, external connected bucket collecting pipeline are assembled in the valve, which has complete functions.

Original packaging Japanese main pump

1、 Negative power + cross power control system. Energy-saving, with standby function and quick response.
