## Pressure Switch (Low Brake)

SMCS - 4265

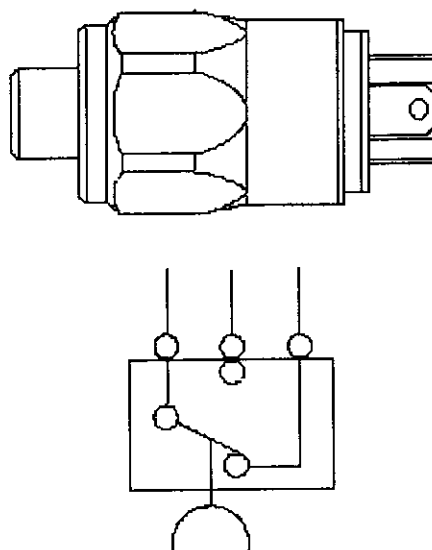

Illustration 1

Table 1

| Specification for 5W-9972 Pressure Switch |     |      |                                                                       |
|-------------------------------------------|-----|------|-----------------------------------------------------------------------|
| Item                                      | Qty | Part | Specification Description                                             |
| -                                         | -   | -    | Maximum pressure limit is 60795 kPa (8818 psi).                       |
| -                                         | -   | -    | Switching range is 5066 to 20265 kPa (735 to 2939 psi).               |
| -                                         | -   | -    | Active maximum pressure setting is 10132 kPa (1470 psi).              |
| -                                         | -   | -    | Rating is 4 Amp 24 V.                                                 |
| -                                         | -   | -    | Maximum voltage is 42 V.                                              |
| -                                         | -   | -    | Adjustment procedure : Turn the screw on the back side of the switch. |
